Our 1921 Summer Garden Novelties

This list contains mostly **ANNUALS** which will flower the first summer—soon after sowing, thus giving you the pleasure of watching new Floral beauties unfold in a short space of time.

A New Race of Double June Flowering Giant Cosmos

Until now we have had the single early and late and the double late flowering. In these **NEW** double flowered Hybrids we offer a double Cosmos which will begin flowering in June increasing in such a manner that by early August the plants are a mass of flowers lasting till frost. The individual flowers measure 4 inches across, are borne on long stiff stems making them especially valuable for cutting. They shade from white to pink, deep rose, cattleya tints, carmine to deep red. The blooms last a long time in water. The plants are not as tall as the ordinary single sorts but more compact and very sturdy. A valuable **NOVELTY**.

Trial, 15c.; ½ pkt., 30c.; pkt., 50c.

Calliopsis Nana "The Garnet"

Nothing more decorative, fairly illuminating the garden with a blaze of glowing color. This New **Calliopsis** eclipses any previously seen. It comes up rapidly from seed sown when frost is out of the ground, and soon expands into bush form with numerous branches covered with an almost incredible wealth of dazzling velvety crimson scarlet flowers, 700 to 800 having been counted on one plant. Allow 2 feet of space to each plant. You cannot miss this glorious **Novelty**. Trial, 10c.; pkt., 25c.

Dwarf African Marigold "Golden Sun"

A most symmetrical plant, compact, about 2 feet in height, and bearing from ground to summit large double glowing orange flowers equal in size and shape to those of the finest tall varieties. Cut and Come Again Vegetable

The most unique new vegetable ever introduced. It is everbearing. The fruit is oblong and green. It should be cut when not more than 4 to 6 inches long. Care must be taken when cutting the fruit that the plant is not injured.

Cooked the same as Asparagus. Particularly delicious when cut in small pieces and cooked with cream. If sown early it will fruit from the latter part of June until October. Plant in hills 3½ to 5 feet apart, from latter part of May until July 1.

One package is enough for 3 to 5 hills—1 oz. for 15 hills. Pkt., 25c.

LAWNS

The Paramount question asked every spring by owner of bungalow or country estate alike is:

How can I establish a beautiful permanent lawn?
 How can I restore a poor lawn?
 How can I keep a well established lawn in good condition?

We say. First of all, buy only the very best seeds obtainable, even if it costs a little more. You wish to raise Grass not weeds. Be sure that the soil for your lawn is rich, so as to furnish the grass roots an abundance of food. Sow the seed as early in the spring as possible to get the grass well started before the very hot weather arrives. It is a matter of opinion whether fall or spring is better to start a new lawn. We are in favor of spring sowing.

If your established lawn has been fertilized in fall it will not need it in spring. If not, the best dressing for a lawn in spring is one of Bonemeal.
